

Description

1 Year Engineering Student placement in the UK's leading manufacturer of moisture resistant primed and wrapped MDF mouldings to the construction and home improvement industries.

Job Summary

Assisting the technical team in delivering process improvement to achieve business excellence.

Main Responsibilities of the Job

Assist the technical team in delivering the day-to-day requirements of the SAM sites on time, in full, efficiently and on budget.

Help deliver departmental key performance indicators, tactical plans and departmental projects to ensure company strategic goals are achieved.

Evaluate existing process and configure manufacturing systems to reduce costs, improve sustainability and develop best practice whilst promoting a culture of standardised work within the production processes.

Research new technology to improve existing processes, including implementation and support operator learning and development.

Daily upkeep of the all relevant departmental systems, for example, Total Preventative Maintenance, Risk Assessment, Profile Information and assist in the management of the Integrated ISO Management System as required.
